

**Answer to Round 4 Data Question 31 for  
RFP Number 2013-CMFD-01**

**Question 31:** Row 46: Indicates that "0 = Original Claim, >0 Refill of existing prescription" begins at column 383, which contains only alphabetical values (ex: "N"). Is this intentional (i.e N = original prescription and Y = refill) or a data entry error?

RX-REFILL is a yes/no indicator identifying the record as a refill or original claim (this field occurs in both record layouts)

RX-REFILL-NBR is an integer 0-5 indicating which refill (0=original) (this field occurs only in the "claims 201107 thru 201309" layout)
